

Press Release

For immediate release

isiQiri interface technologies, and market leading Pro-AV distributor Stampede, launch, patented Q-Screen technology, bringing multi-user, multi-input interactivity to large and cinema format projection screens at InfoComm 2011.

San Jose, CA, and Hagenberg, Austria, 15th June 2011- Projector dealers and end users in North America and South America can now join the surge in interest and adoption of multi-user, multi-touch screens, but on the grand scale of the very large formats offered by traditional projection methods.

Q-Screen is a unique patented light conductive foil system which when added to the rear side of front projections systems creates a completely interactive surface which can be controlled or interacted with, using up to four discrete laser, "Q-pointer" devices, bringing true multi-user, multi-point interaction to projection screens. Q-Screen is entirely modular and can therefore be built to accommodate anything from 6ft diagonal to cinema scale screens. Because of its unique properties the Q-foil modules can also accommodate curved or large dome projection surfaces.

Q-Screen's first public showing in the USA will be at Stampede's booth, # 2575, at the upcoming InfoComm 2011 show in Orlando, FL. Visitors to Stampede's Western-theme InfoComm booth will experience the interactive Q-Screen while playing a "Shoot Gallery" game on a massive 12ft screen.

"It's a truly unique innovation," says Bob Senior the company's President, who is responsible for the company's US market entry. "It will open new avenues of interactivity and reinvigorate the projection industry bringing new market opportunities and leveraging the growing content base of multi-user, multi-touch material. We are also very excited about our partnership with Stampede, who has the reputation, reach and professionalism to help us bring this unique new product to market."

"This will be the star attraction of the show", said Kevin Kelly, President and COO of Stampede. "Once they see it in action, our dealers are going to enthusiastically embrace this technology. The Q-Screen gives dealers a sales opportunity for customers who were previously reluctant to completely change over to a new interactive system. With Q-Screen dealers can offer a quick, easy and affordable upgrade to state-of-the-art technology. This is just what the market is demanding."

Q-Screen is shipping in Europe, from the company's headquarters in Hagenberg, Austria. In an exclusive distribution agreement, Stampede will be responsible for Q-Screens availability in the USA, Canada and South America.

About isiQiri interface technologies.

Based in San Jose, CA. USA, and Hagenberg, Austria, isiQiri is a market leader in the design and implementation of multi-user, multi-touch man machine interactivity. It's patented, Q-Foil, light transmissive film is the basis of a range of products, the first of which, Q-Screen, brings multi-input interactivity to very large and extremely format projection screens.

About Stampede.

Known for its value-added distribution, Amherst, NY-based Stampede is the leading distributor of presentation equipment including LCD/DLP projectors and flat panel displays. Stampede provides a complete range of brand name presentation equipment to a variety of audio/video, computer, and home theater resellers and integrators in the United States, Canada and Latin America. These resellers rely on Stampede for value-added services in distribution, marketing and solution-based sales. Stampede annually produces the "Big Book of AV," a 816-page catalog and companion website (www.BigBookofAV.com) providing hundreds of sales, installation and spec tips for Stampede's dealers in addition to product details on more than 5,000 SKUs.
